INTRODUCTION

Background

- Technology is one of the fastest growing industries
- Start-ups are popping up almost every day
- Many unknown technology hubs around the world that are making waves in the industry
- Investors are looking for untapped talent
- Entrepreneurs are looking for emerging markets

Problem

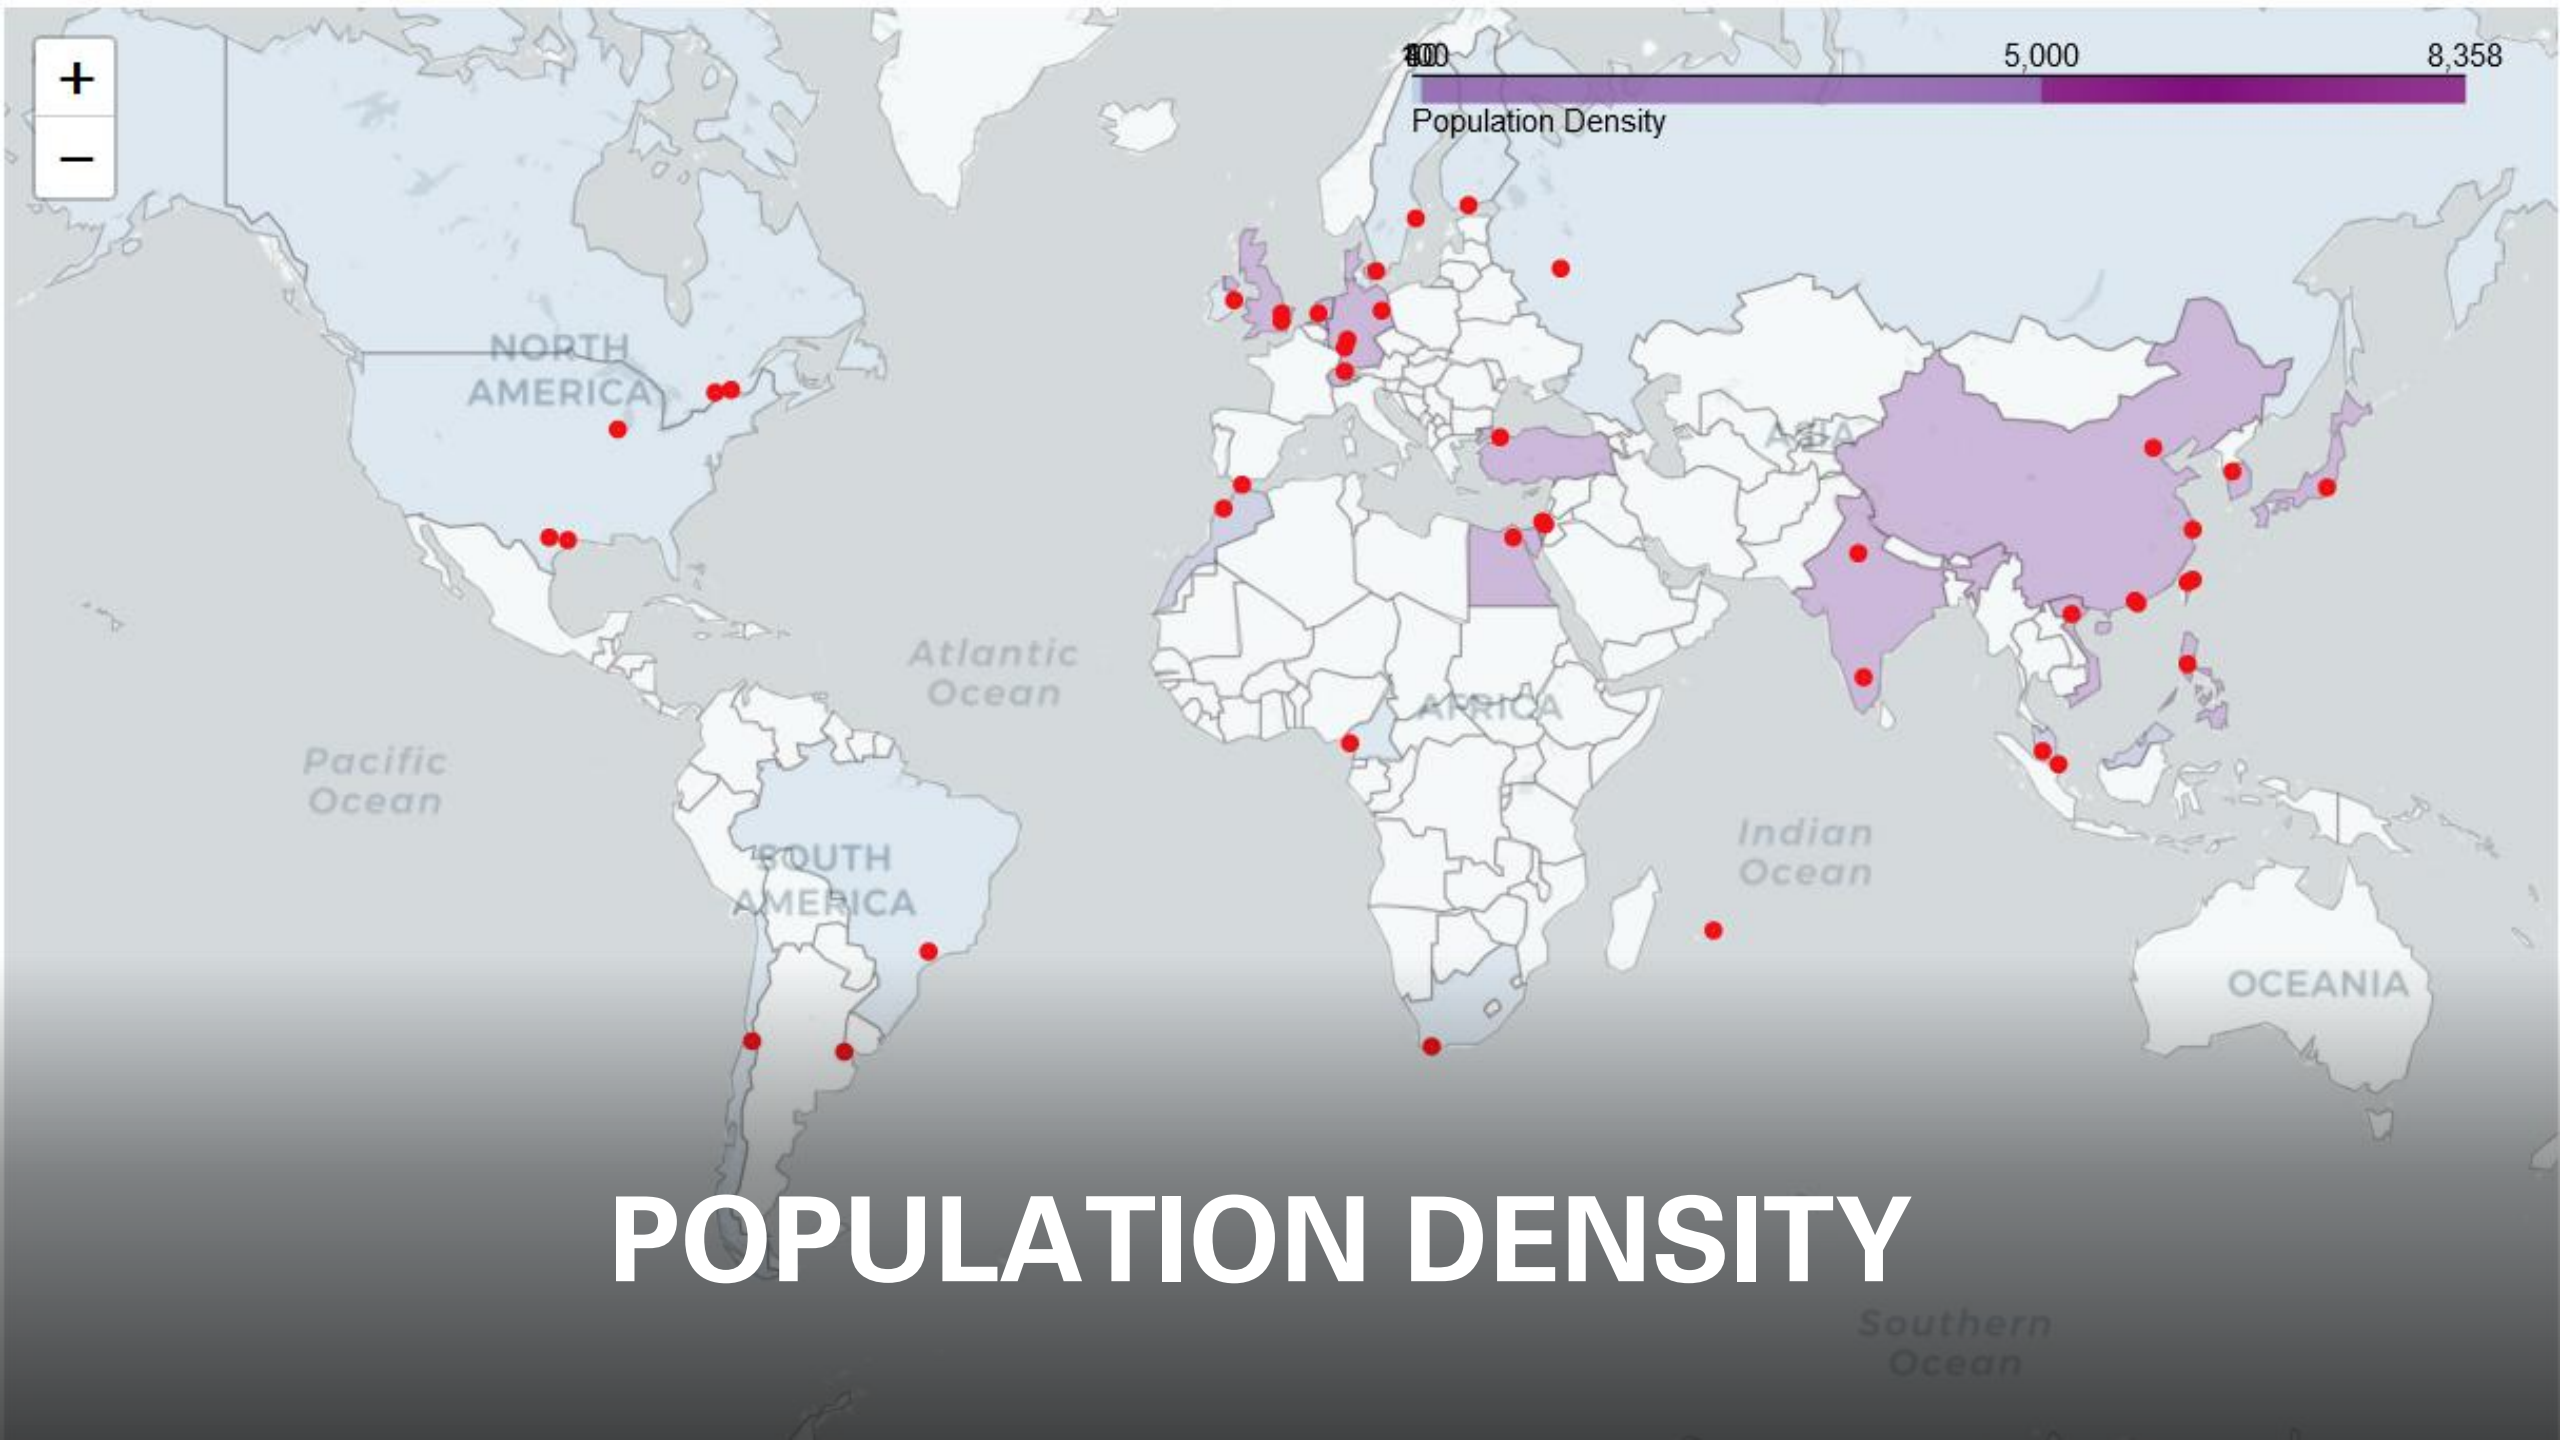

- To find the up and coming technology hubs to help not only entrepreneurs but also investors.
 - Bring capital and talent together
- 

Data Sources

- In order to find the most popular technology hubs around the world data was extracted from multiple sources:
 - Wikipedia Technology Hubs Worldwide for the Latitude and Longitude of each hub (City/General Location)
 - Startup Genome for cities with high start-up rates divided into sectors
 - Bloomberg for countries with a booming tech scene
- In order to find the nearby venues common to all the technology hubs and for each hub:
 - Foursquare API for venue category and most popular nearby
- To find the population density and other demographic information of each respective district or city:
 - World Population Review (World Bank)
- To find the housing prices for each respective city:
 - Numbeo for property price-to-income by city, country
- To map out the world and the cities:
 - Coursera world GeoJSON file

Discussion

- Most common venues for all clusters were directly related to food.
 - The average of food related venues for all region was 60%
 - The average of food related venues for major metropolitan areas was 69%
 - Similar restaurants within the food related venues ranged from: Italian, Chinese, Japanese, Middle Eastern, and Mexican
 - Other similar venues related to recreational/attraction
 - Many of these clusters resemble each other with respect to common venues
- 

Conclusion & Future Direction

There are many technology hubs worldwide that are experiencing vast growth and should be focused on as they create waves in the industry

Clustering could be more specific to cities rather than regions

More data could be useful for further research for a larger and more well constructed view of each technology hub
